Audit IT

Hadi Hesab Tehran Audit Firm, in performing the audit process, utilizes modern systems and technologies as well as related tools, tailored to the nature of activities and the risk level of the entities under review, based on data analysis and tests of the accuracy of operational execution. The application of these tools enables the intelligent entry of data from the entity under review, accelerates the audit process, reduces the overall cost of the work, and enhances the quality of the audit. On the other hand, it collects audit documentation in electronic (magnetic) format, leading to savings in paper consumption and a reduction in archiving costs.
